WOODY™ HC

HUM CANCELING STACK®

Seymour
Duncan®

Designed specifically for steel string acoustic guitars, the **WOODY™ HC** is a humbucking soundhole pickup that combines superior acoustic sound and quiet operation – even in the loudest band situation. Chords are articulate and single note lines are smooth when moving from one string to another. You get clean, clear acoustic sound whether you're plugged into your favorite amp or a PA system.

Each **WOODY™ HC** is dual potted (wax and epoxy) to eliminate microphonic feedback and to insure mechanical integrity and reliability. The heavy duty studio quality 14' cable with its hand-soldered 1/4" plug provides a quiet, low capacitance and kink-free connection to your amp.

The **WOODY™** is available in two other versions: the **WOODY™ SC**, a single coil model that sounds big, bright and balanced; and the **WOODY™ XL**, our professional model with adjustable pole pieces and Stack® Humbucking design.

All this quality and performance is built into a beautiful hand-rubbed wood casing that easily pops into standard 3.75" (94mm) to 4.0" (100mm) soundholes! Instructions included.
