WOODY™ SC

SINGLE COIL

Seymour  
Duncan®

Designed specifically for steel string acoustic guitars, the **WOODY™** is a simple, affordable soundhole pickup that combines good acoustic sound and quiet operation, even under the loudest band situation. The Woody's shaped magnetic field provides even, balanced output from each string-especially the "B" string. Chords are well articulated and single note lines are even when moving from one string to another. You get clean, clear acoustic sound whether you're plugged into your favorite amp or a sound reinforcement system.

Dual potted in wax and then epoxy to eliminate microphonic feedback and to insure mechanical integrity and reliability. The heavy duty studio quality 14' cable with its top quality 1/4" hand-soldered plug provides a quiet, kink-free, low capacitance connection to your amp.

Available in two other versions: the **WOODY HC™**, our Hum Cancelling Stack® has two fully shielded coils for hum cancelling and rich full acoustic sound. The **WOODY XL™** is a professional model with adjustable pole pieces and a Stack® humbucking design.

All this quality and performance is built into a beautiful hand rubbed wood casing that easily pops into a standard 3.75" (94mm) to 4.0" (100mm) soundhole! Instructions included.
